

## Day 3 - Activity

### Task 2 :

Create your own resume data in JSON format

### Output:

The screenshot shows a web browser's developer console with the 'Console' tab selected. The console displays a JSON object representing resume data. The object has a 'basic' property (an object), a 'work' property (an array of 1 object), a 'volunteer' property (an array of 1 object), an 'education' property (an array of 1 object), and an 'awards' property (an array of 1 object). The 'basic' object contains: 'email' (string), 'image' (string), 'location' (object with address, postalCode, city, countryCode, state), 'name' (string), 'phone' (string), 'profiles' (array of 1 object), 'summary' (string), 'title' (string), and 'url' (string). The 'location' object contains: 'address' (string), 'postalCode' (string), 'city' (string), 'countryCode' (string), and 'state' (string). The 'profiles' array contains an object with 'summary' (string), 'title' (string), and 'url' (string). The 'work' array contains an object with 'title' (string), 'company' (string), 'start' (string), and 'end' (string). The 'volunteer' array contains an object with 'title' (string), 'organization' (string), 'start' (string), and 'end' (string). The 'education' array contains an object with 'degree' (string), 'school' (string), 'start' (string), and 'end' (string). The 'awards' array contains an object with 'title' (string), 'year' (string), and 'description' (string). The console also shows the file path 'guvi\_script.js:108'.

```
▼ {basic: {...}, work: Array(1), volunteer: Array(1), education: Array(1), awards: Array(1), ...} ⓘ  
  ▶ awards: [{...}]  
  ▼ basic:  
    email: "sethusaran123@gmail.com"
